

## RESULT DOWNLOADER

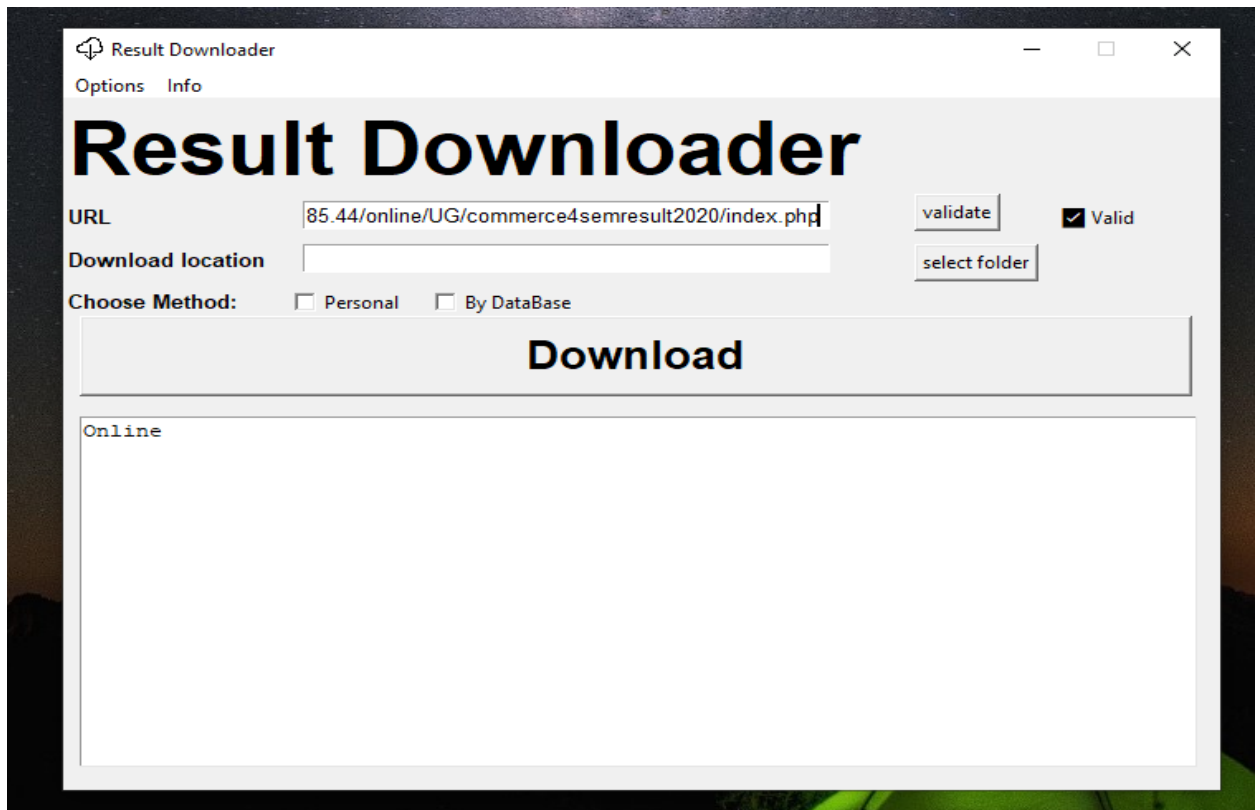

Result Download Automation System is a Web based system that allows the user to download the semester result of a batch and also individually from the University Website using the Student Database.

## HOW TO USE

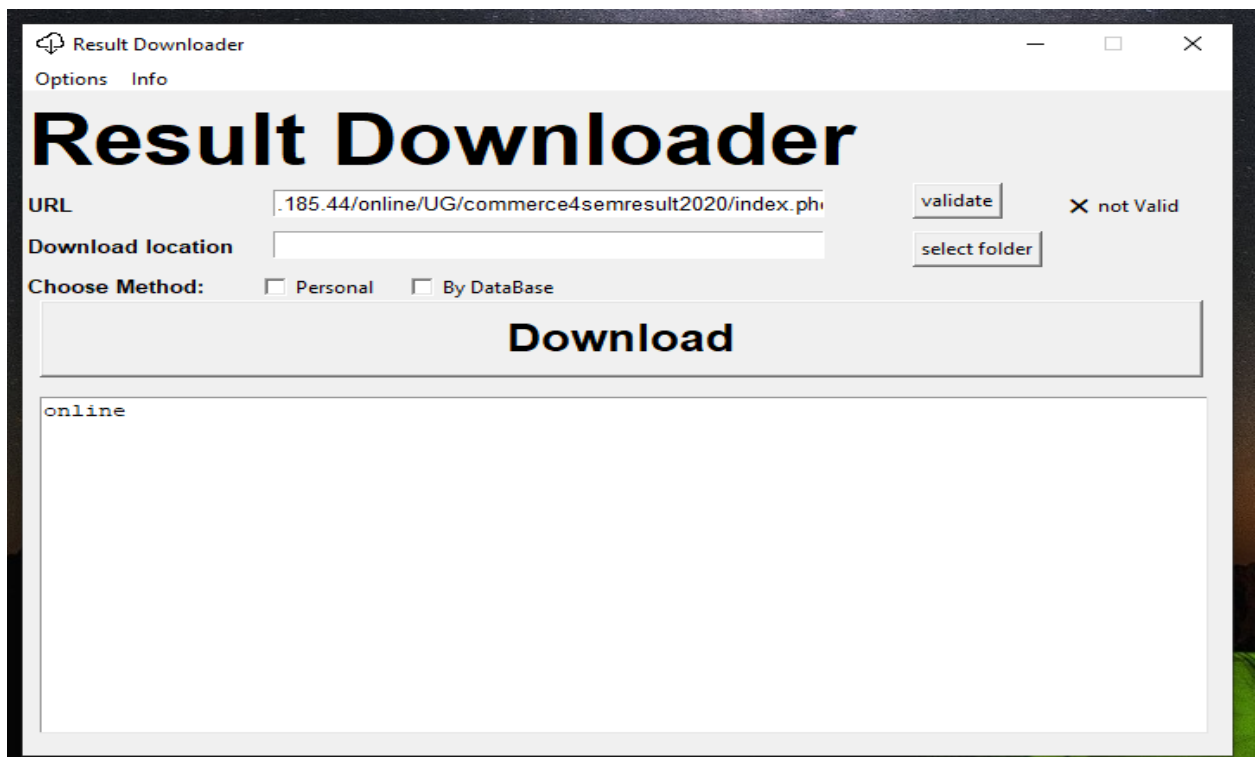

1. Open the application. A window will be opened as shown below:

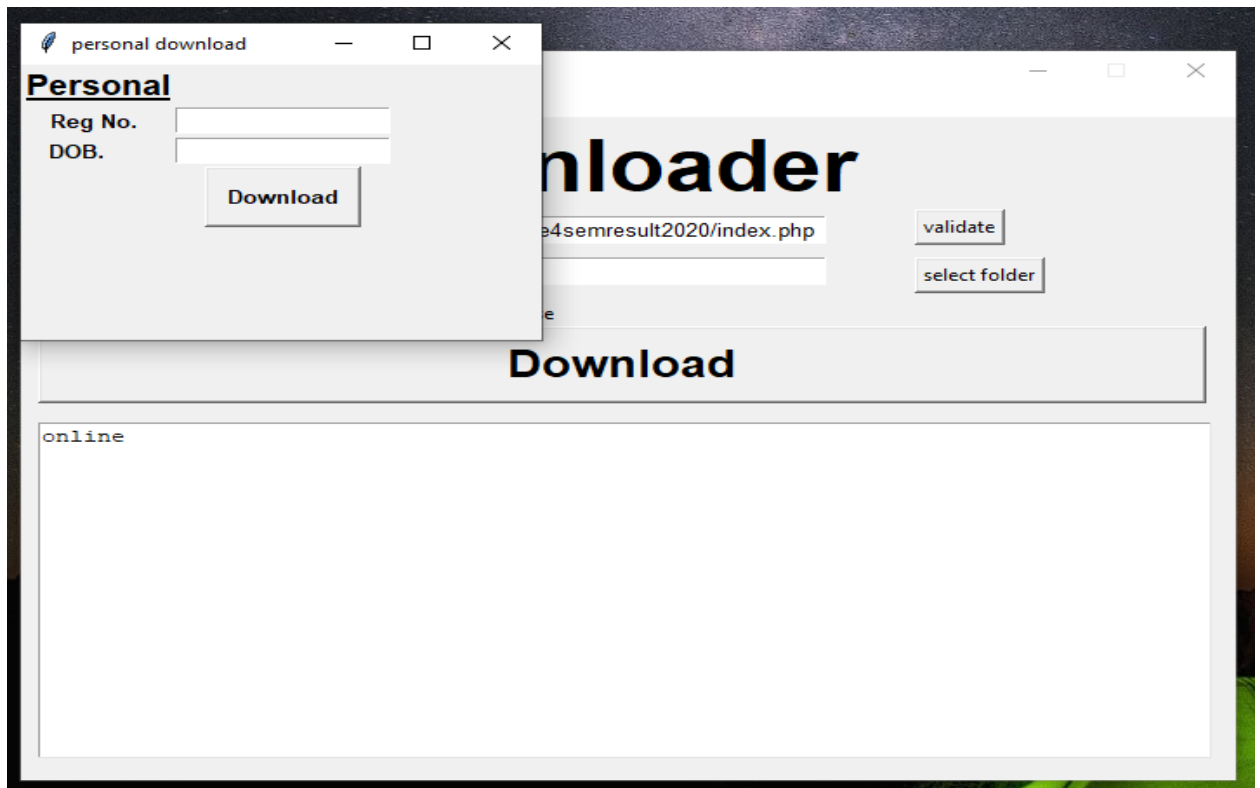

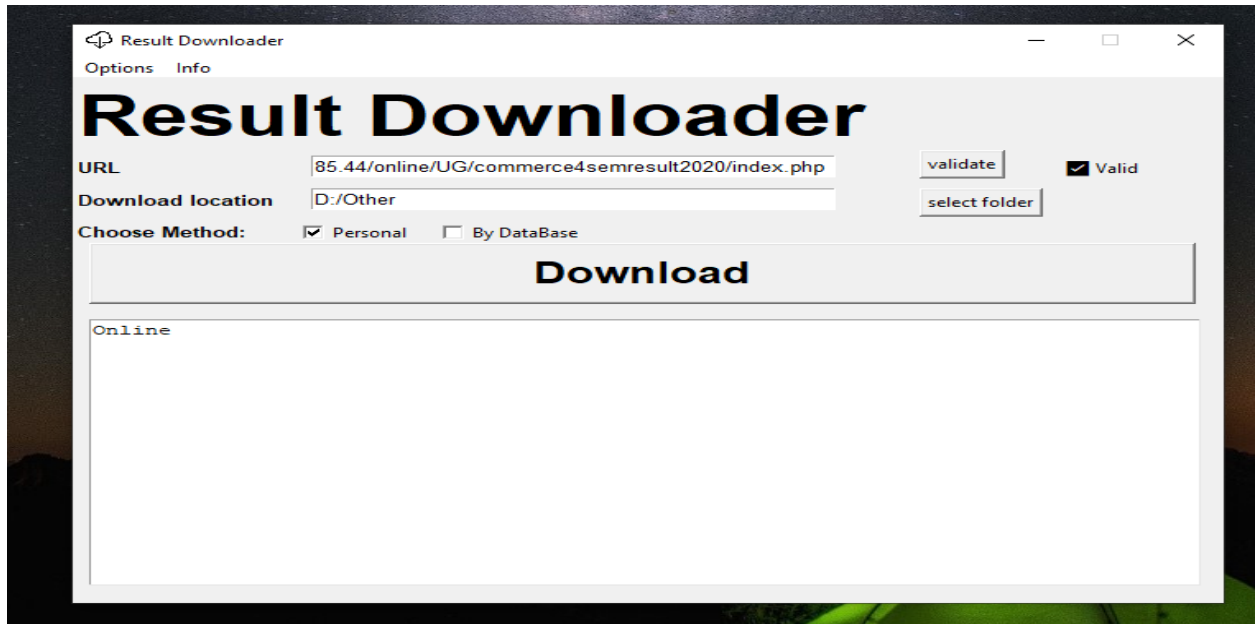

2. Give the link in the URL box then, Click on **validate**. If the link is valid then a **Checkbox** with a tick mark and name **Valid** will be shown there as given below:

If the link is **invalid** then then a **Checkbox** with a cross mark and name **not valid** will be shown there as given below:

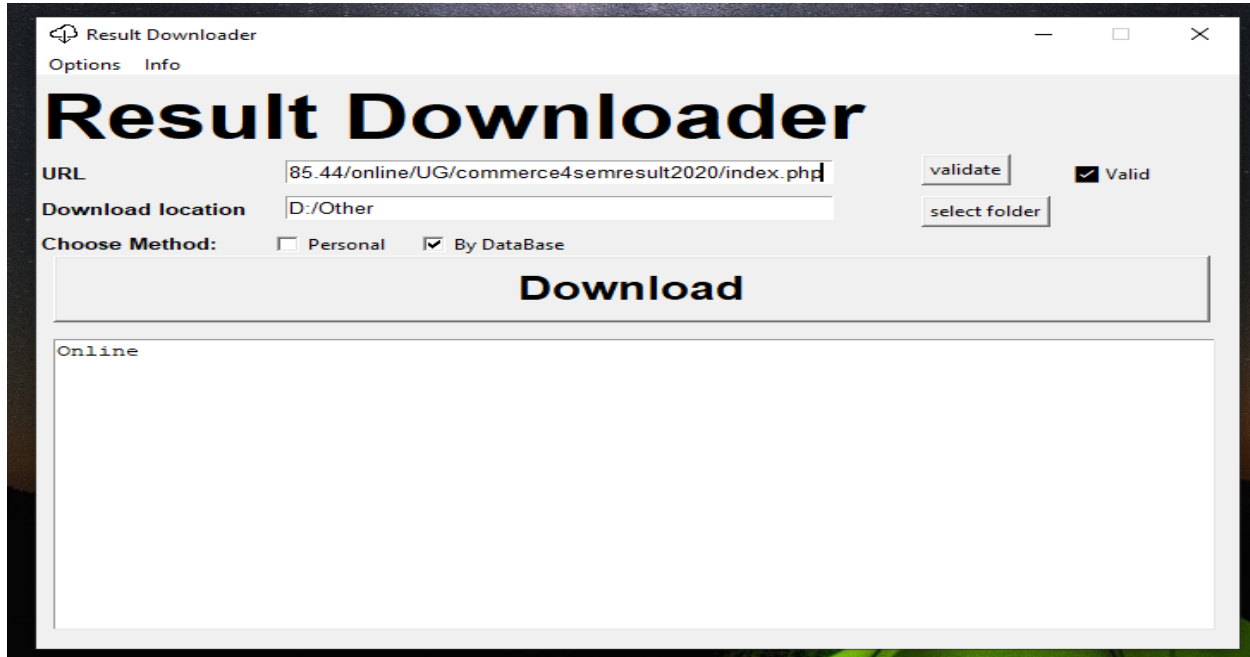

3. Select the location where we want to download the Results.
4. Select the method( **Personal** / **By Database**). If we select **Personal** and press **Download** then a window will be opened as given below:

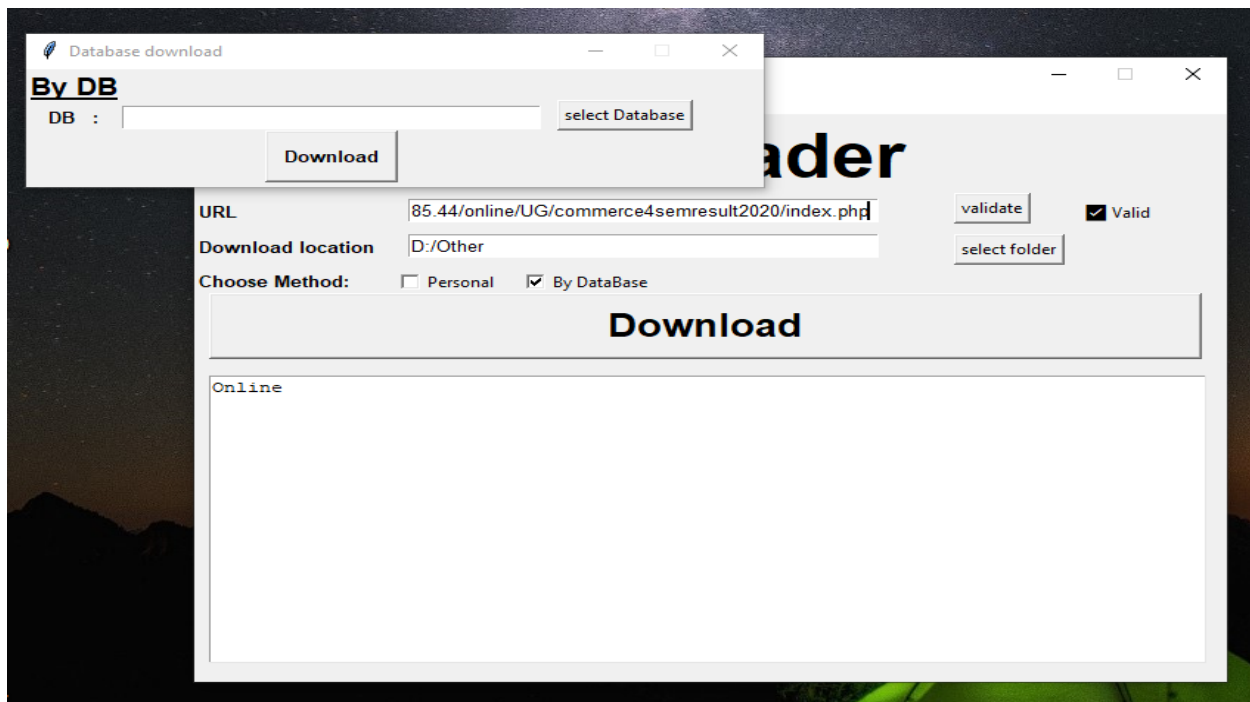

Give the register number and date of birth, then Click on **Download**. Then the result of that particular student will be downloaded in the specified location.

If we select **By Database** then press **Download** then a window will be opened as given below:

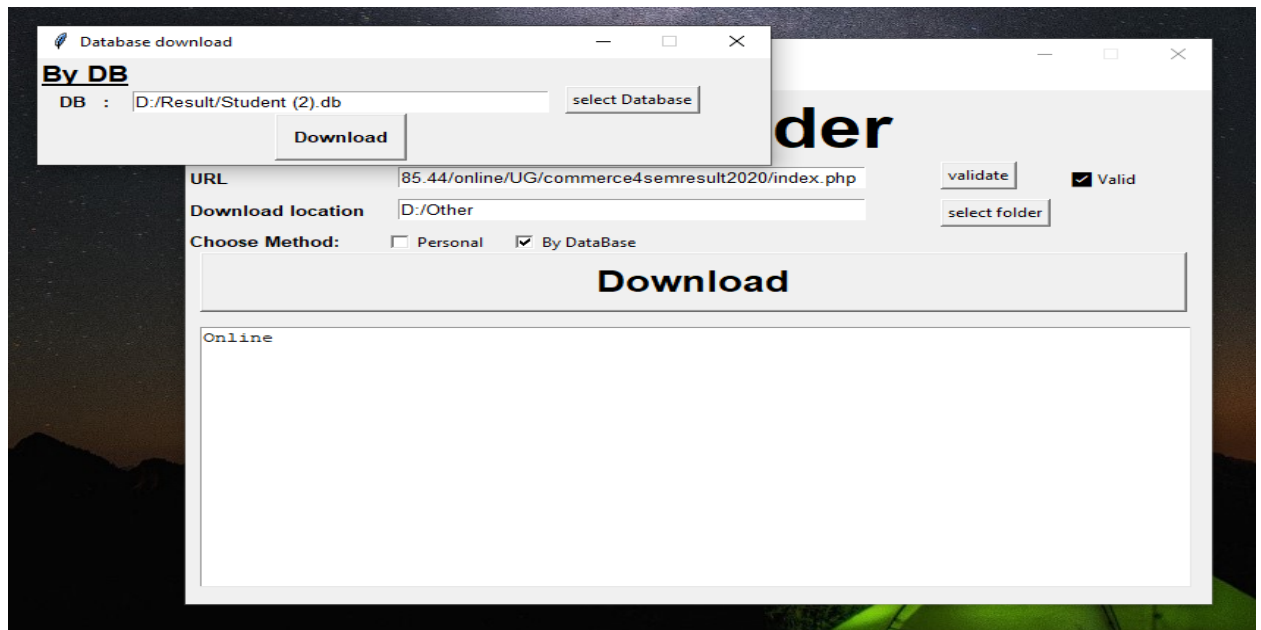

The screenshot shows the 'Result Downloader' application window. At the top, there are tabs for 'Options' and 'Info'. The main title is 'Result Downloader'. Below the title, there are input fields for 'URL' (containing '85.44/online/UG/commerce4semresult2020/index.php') and 'Download location' (containing 'D:/Other'). To the right of the URL field is a 'validate' button and a 'Valid' checkbox. Below the download location field is a 'select folder' button. Under the 'Choose Method:' section, there are two radio buttons: 'Personal' (unchecked) and 'By DataBase' (checked). A large 'Download' button is centered below these options. At the bottom, there is a section labeled 'Online' with a large empty text area.

This screenshot shows the same 'Result Downloader' application window as above, but with a 'Database download' dialog box open in the foreground. The dialog box has a title bar 'Database download' and contains the text 'By DB'. Below this, there is a label 'DB :' followed by an empty input field and a 'select Database' button. At the bottom of the dialog box is a 'Download' button. The background application window is partially visible, showing the same URL, download location, and 'By DataBase' method selected.

Provide the required Database and Click on **Download** button.

Then the Result of Students whose data is given in that Database is downloaded in the specified location.
